Digital Filter

By The MathWorks, Inc.

Create Model

Create a Simulink model to filter discrete-time signals.

This model uses recommended configuration parameters for simulating discrete-time systems, including a discrete-time solver and no signal logging.

This template shows how to use built-in Simulink blocks for very basic signal processing tasks, like filtering scalar signals using precomputed filter coefficients. To design signal processing systems in Simulink, use blocks from [DSP System Toolbox](#).
